Concurrent DSH Revenue Management: Medicaid Supplemental Revenue

One of the many tangential benefits of concurrent management of the DSH revenue stream is the ability to identify In-State and Out-of-State Title XIX recipients who have been misclassified, for any number of reasons (including but not limited to a State-level Medicaid eligibility sub-system that is 6-8 months "backlogged"), by the Hospital as to financial class status, and, **before** the State specific Medicaid billing window has been closed. This allows the Hospital to bill the Medicaid program for the inpatient stay. In this case, not only will the Hospital increase its reported Medicaid eligible "days" component for DSH/340B reimbursement purposes, it also receives the concurrent benefit of the net revenue generated by the reimbursement from Medicaid.

The sample report below shows a total of 1,578 covered Medicaid days where the Hospital classification of these patient ("Financial Class 1") is not Title XIX. However, each of these patients were eligible for Medicaid ("Eligibility Category") during their inpatient stay.

Sample Title XIX Rebilling Report
